

## **INSTALLATION PROCESS**

### **Step 1. Site Visit**

Our Builder will meet you onsite to discuss your pool location and requirements.

### **Step 2. Choose Your Design & Colour**

Choose your pool design and colour selection from our wide range.

### **Step 3. Quotation & Acceptance**

Crystal Blue Pools will provide a fixed price quotation. Once you are satisfied with your quote, we will ask you to sign a quote acceptance. This authorises us to prepare documents ready for lodgement of the Application for Council approval.

### **Step 4. Council Certification**

We submit an application to your local Council to obtain approval and a Construction Certificate to commence.

### **Step 5. Excavation**

We will begin by pegging out your pool to ensure the correct positioning. Our excavator will then excavate the area and the base is then screeded so that your pool sits perfectly level. A final check is completed and your pool is ready to go in.

### **Step 6. Installation**

Your fibreglass swimming pool shell arrives to site and is craned into position. All pool plumbing and pool filtration equipment is installed and tested at this time.

### **Step 7. Backfilling**

Your swimming pool will be filled with water while the backfilling occurs. This is done to ensure equal pressure and maintain stability during the backfilling process.

### **Step 8. Landscaping**

A concrete coping is then poured to hold your pool in place.

### **Step 9. Handover**

Your swimming pool installation now complete.

You can now start enjoying “your dream pool at an affordable price”.
